

Why VulnDB®?

Total Entries

CVE is Not Enough

- CVE fails to report over 92,000 confirmed vulnerabilities¹
- Alarming, 40% of 2021 omissions were high to critical in severity²
- The vulnerabilities CVE does report are often late and limited in detail

Reliance on CVE Leaves You Vulnerable

- CVE is the fundamental data source for scanners and enterprise security technologies
- Enterprise vulnerability and risk management models are dependent on incomplete data
- Corporate and customer assets are therefore at greater risk of compromise

VulnDB Drives Informed Cybersecurity Decisions

- ✓ VulnDB is the most comprehensive source of actionable vulnerability intelligence
- ✓ Includes vulnerabilities in COTS and 3rd Party Code, Vendor Risk Ratings, and more
- ✓ Provides timely vulnerability alerts without scanning
- ✓ Trusted by leading brands including Adobe and Northrop Grumman
- ✓ Integrates with leading tools and ticketing systems
