

FLASHPOINT

# Flashpoint Automate

Actionable threat intelligence through automation

Today's threat landscape is dynamic and constantly evolving as **threat actors continue to advance their operations.**

While security teams work to address this ever-changing and ever-evolving challenge, it is imperative they have the contextual enrichment needed to reduce the time to take action or make a decision.

Addressing this challenge becomes exponentially more difficult with the current cybersecurity analyst workforce shortage and constant strain on resources, whether that be headcount, technology, budget, or time.

It is critical that security teams leverage a solution to reduce the workload and ensure resources are being used effectively and efficiently in order to fulfill their mission of protecting their company and assets.

## Flashpoint Automate is the workflow automation engine that **extends the value of threat intelligence.**

Flashpoint Automate is the low-code automation platform integrated into Flashpoint solutions that organizations need to accelerate repeatable security-related processes in order to help detect, analyze, and remediate risk faster.

Cyber, fraud, and physical security teams can build and customize automated workflows via drag and drop capabilities in a visual way that represents an overall security related process, which saves time and reduces risk across the organization.

In addition to the Flashpoint Automate platform and interface, a continuously growing suite of third-party integrations and capabilities allow users to build the automated equivalent of what they are performing manually today.

### Key Features

#### **AUTOMATE WORKFLOWS INTEGRATE DIRECTLY WITH FLASHPOINT'S INTELLIGENCE PLATFORM**

The value of Flashpoint's extensive collections and intelligence combined with Automate's advanced technology saves organizations time by allowing teams to automate repetitive tasks, acting as the necessary solution security teams need to take action and stop threats.

#### **LOW-CODE, DRAG AND DROP FUNCTIONALITY**

Utilize a visual canvas with drag-and-drop actions to build workflows and automations, eliminating the need for resources with coding or an engineering background. Users are not required to know how to code, but if they do, there are capabilities within the platform that will allow users to do so.

#### **PRE-BUILT REFERENCE WORKFLOWS**

Leverage pre-built reference workflows, which pair closely with Flashpoint's intelligence, directly out-of-the-box or customize them to better suit the needs of your organization.

#### **CONTINUOUSLY GROWING SET OF THIRD-PARTY INTEGRATIONS**

Integrate with third-party vendors (such as Atlassian Jira, Okta, ServiceNow, Slack, TheHive, VirusTotal, and many others) to help enrich workflows, provide context needed to prioritize, make decisions, and take action. Integrations include commonly used ticketing systems and enrichment sources to help automate investigations and operations workflow.
