

# Threat Response & Readiness Subscription

When an organization is targeted by ransomware or cyber extortion, it must quickly determine the extent of the attack, determine the response plan, and mitigate the impact. Flashpoint Professional Services (FPS) offers a Threat Response & Readiness Subscription that helps companies prepare for, as well as quickly assess and respond to, a ransomware or cyber extortion attack.

## Service Overview

Flashpoint Threat Response & Readiness Subscription is a natural extension of Trusted Intelligence which provides organizations with a decision advantage over threats and adversaries. Our data collections, threat actor research, and threat actor engagement are uniquely provided by robust technology, unmatched multilingual intelligence analyst expertise, and a highly experienced FPS team.

Flashpoint provides research to organizations impacted by attacks, as well as directly engages with threat actors; part of this engagement may also include providing access to cryptocurrency.

## Ransomware Response

Ransomware and extortion are responsible for billions of dollars in losses each year across industries, and while some high-profile attacks and success stories reach the mainstream, they are a tiny percentage of the true number of incidents and actual payouts made to adversaries. Flashpoint provides research to organizations impacted by attacks, as well as directly engages with threat actors; part of this engagement may also include providing access to cryptocurrency.

- FPS helps teams in the event of a single ransomware or cyber extortion incident, including tailored response and recovery of internal systems, resources to procure and acquire cryptocurrency on behalf of the impacted organization, as well as extensive monitoring within our expansive illicit community collections.

## Readiness: Cyber Extortion Training

*Includes a workshop or Tabletop Exercise (TTX)*

- The workshop educates customer teams on ransomware, how it works, why organizations become infected, the evolution of this threat, profiles of attackers, cryptocurrency and issues related to payments, and other details relevant to the customer organization or vertical.
- The TTX will bring together critical stakeholders to discuss simulated scenarios, assess the efficacy of current plans, ensure clarification on roles and responsibilities, and improve coordination to help better mitigate future attacks.

In both Response and Readiness deliverables, Flashpoint works with organizations to develop contingencies in the event of an attack, including establishing a process to ensure payments can be made securely and quickly.

## Subscription also includes:

- **Procurement of cryptocurrency:** This engagement enables procurement of cryptocurrency on behalf of your organization.
- **Ransomware workshop:** An interactive, hands-on workshop, educating your team about ransomware attacks, as well as additional information relevant to your organization or vertical.
- **Table-top Exercise (TTX):** Access to TTX which simulates real-world scenarios, enabling your team to prepare and mitigate risk for a potential event.

## Key Benefits:

- Develop contingencies in the event of an attack, including establishing a process to ensure payments can be made securely and quickly.
- Prepare in advance of an incident with training and education, and assist in rapidly acquiring cryptocurrency in the event of immediate attack.
- Access to Flashpoint intelligence analysts, providing the necessary intelligence to support a number of critical assessments, starting with the determination of whether an attack is a legitimate ransomware or extortion situation.
- Determine the credibility of an attacker's claims, as well as investigate the history of the digital wallet accepting the ransom payment.

## ABOUT FLASHPOINT

Trusted by governments, global commercial companies, and educational institutions, Flashpoint helps organizations protect their most critical assets, infrastructure, and stakeholders from security risks such as cyber threats, ransomware, fraud, physical threats, and more. Leading security practitioners—including cyber threat intelligence (CTI), vulnerability management, DevSecOps and vendor risk management teams—rely on the Flashpoint Intelligence Platform to proactively identify and mitigate risk and stay ahead of the evolving threat landscape.
